

There is a way to remove the signature of CisCleanupTool_x64_3.1.0.55.exe and CisCleanupTool_x86_3.1.0.55.exe. It requires some work.

First step is to install the Windows SDK. Get it from [Windows SDK - Windows app development | Microsoft Developer](#) ⁹ and install it. I will assume Windows SDK is installed in the default location C:\Program Files (x86)\Windows Kits\10\bin\10.0.26100.0.

This tutorial will be for the 64 bits version of Comodo Uninstaller and can be adjusted to work for the 32 bits version.

Once the SDK is installed open the command prompt as administrator in the folder where CisCleanupTool_x64_3.1.0.55.exe sits.

First we need to temporarily set a path pointing to signtool so the command prompt can call it. The path will disappear when the command prompt gets closed.

At the command prompt execute:

```
set PATH="C:\Program Files (x86)\Windows Kits\10\bin\10.0.26100.0\x64";%PATH%
```

Then to remove the signature execute:

```
signtool.exe remove /s CisCleanupTool_x64_3.1.0.55.exe
```

Once the signature is removed the executable can be started without any ado.
